

WEB BASED REPORTING AND DATA MINING

IRIS is a report application designed specifically for non-IT users. IRIS is easy to use, yet rich in reporting options. Both ad-hoc and pre-configured reporting capabilities are provided. As a web-based application, IRIS is fully accessible to any user with Internet connectivity and Microsoft Internet Explorer 6.0 or above.

Almost all IRIS reports export directly to Microsoft Excel. Consequently, data is easy to share, manage and manipulate. And, of course, further analysis is possible by leveraging the many tools available in Microsoft Excel.

A wide range of claims system data is made available through a simple to use interface. Over 70 claim-specific data elements can be exported. Payment and reserve data can be exported in detail or summary formats. A set of pre-made exports/reports are available for fast, traditional-style reporting.

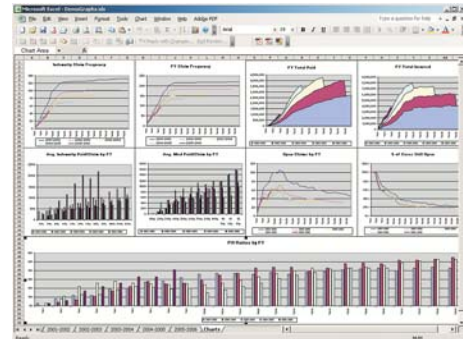

PROGRAM ANALYSIS TOOLS

IRIS includes functionality beyond simple data reporting. Report options such as the IRIS Fiscal Year Analysis and Multi-Tier reports provide risk managers and analysts with powerful data analysis tools.

The Fiscal Year Analysis generates a standardized set of graphs hand chosen to aid risk management

staff analyze their program progress. Because multiple fiscal periods are displayed, period trending is readily accessible. Running the Fiscal Year Analysis extremely easy. A value date and a mouse click are the only user inputs needed to produce the full graph set.

Drilling down on trends is usually a time consuming task. IRIS includes tools to help comparatively analyze data quickly and easily. The Multi-tier reports allow users to create cross tabulation reports by simply picking fields, or dimensions, from a list. For example, a report that breaks down claims frequency by cause of injury and occupation can be created with just three mouse clicks.

Body Site	Multiple Injuries	Multiple Body Parts	Multiple Dates Injury	Multiple Dates Exposure	Multiple Dates Occurrence	Multiple Dates Loss	Multiple Dates Settlement	Multiple Dates Payment	Multiple Dates Reserve	Multiple Dates Other	Total Incurred
